

Incident report analysis

Instructions

As you continue through this course, you may use this template to record your findings after completing an activity or to take notes on what you've learned about a specific tool or concept. You can also use this chart as a way to practice applying the NIST framework to different situations you encounter.

Summary	We recently experienced a DoS attack, which compromised the internal network for two hours until it was resolved. During the attack, your organization's network services suddenly stopped responding due to an incoming flood of ICMP packets. Normal internal network traffic could not access any network resources. The incident management team responded by blocking incoming ICMP packets, stopping all non-critical network services offline, and restoring critical network services.
Identify	The incident management team audited the systems, devices, and access policies involved in the attack to identify the gaps in security. They found an open port on the firewall which enabled the attacker access
Protect	All ports have been closed that are not required for regular business operations

Detect	To detect new unauthorized access attacks in the future, the team will use a firewall logging tool and an intrusion detection system (IDS) to monitor all incoming traffic from the internet.
Respond	To address this security event, the network security team implemented: • A new firewall rule to limit the rate of incoming ICMP packets • Source IP address verification on the firewall to check for spoofed IP addresses on incoming ICMP packets • Network monitoring software to detect abnormal traffic patterns • An IDS/IPS system to filter out some ICMP traffic based on suspicious characteristics
Recover	Restore all affected network services and verify they are functioning normally. Continue monitoring the network for any signs of further malicious activity, document the incident, communicate the changes to staff, and review the incident response plan to improve recovery from future attacks.
